## **What is Green Cleaning?**

Green cleaning is the use of effective cleaning practices and products that protect human health and the environment.

---

### **Why Green Cleaning?**

- **Reduces Illness**  
Less exposure to harsh chemicals means improved indoor air quality and lower illness rates in the home.
- **Improved Cleaning Efficiency**  
Green cleaning products work just as well, if not better, than traditional industrial products.
- **Environmentally Friendly**  
Green products and methods reduce the negative impact of cleaning on the environment, such as indoor air quality. Many also have less packaging than traditional cleaning chemicals, which means less waste.
- **Cost control**  
Use of green products keeps costs down because they are concentrated, which means a small amount of chemical can go a long way.

### **What is 1ST GENERATIONAL GRACE HOMES, LLC Green Program?**

- We use microfiber cloths to keep dust from becoming airborne in your home.
- We use microfiber mops and color-coded cloths that use less water and chemicals, and help prevent cross-contamination.
- We use cleaning chemicals that meet the standards set by Green Seal®.
- We use vacuums that have HEPA filters to prevent dust and other contaminants from re-entering the air.
